

Nour Eid

Head of Strategy, Aerospace Technology Institute (ATI)

Since joining the ATI in 2017, Nour has led on shaping the organisation's long-term objectives and establishing how best to maximise its impact for the UK. He provides the framework for how the ATI engages with the aerospace supply chain and ensures its strategy aligns with the requirements of the sector. Most recently, Nour developed the strategic and commercial elements of the Hydrogen Capability Network and previously supported collaborative innovation through the ATI Hub.

A Chartered Engineer and graduate of Imperial College London with a first-class Master's degree in Aeronautical Engineering, Nour began his career at Airbus in Filton as technical lead in the weight estimation and control team. He was responsible for the evolving wing weight of the A350, led weight-saving campaigns for the A380 and A350 performance improvement programmes, and worked closely with international suppliers across major programmes.

His experience also includes secondments to Toulouse and to British Airways at London Heathrow, supporting engineering teams at critical stages of aircraft development and delivery.
